

DREW GALBRAITH

www.linkedin.com/in/drew-galbraith-profile/

I am a Software Engineer with a strong background in AI. I have experience in cloud infrastructure (AWS) and wrangling raw, real-world data, using both together to build scalable AI pipelines. As a computer scientist with an applied humanities background, I thrive on cross-functional teams, bringing stakeholders together to create production-ready systems.

EDUCATION

BA in Applied Linguistics | Brigham Young University

Degree obtained in June 2024; GPA █████

Partial MS in Computer Science | Brigham Young University

September 2024 - September 2025 █████

EXPERIENCE

Software Engineer | Nexio | Orem, UT

August 2025 – Present

- Developed AI pipeline to automate underwriting processes, including extracting relevant data from documents with applications in any form.
- Created and maintained full-stack application features, contributing to both backend services and user-facing functionality aligned with evolving product requirements.
- Collaborated closely with product managers, designers, and fellow engineers to deliver internal and customer-facing solutions; strong focus on eliminating documentation tech debt to make code more AI and dev friendly.

LLM/AI Research Intern | UMD - Applied Research Lab for Intelligence & Security | Washington, DC

May 2024 – August 2024

- Led a small cross-functional team in designing and delivering an LLM research tool, including automated evaluation; close collaboration with non- and semi-technical stakeholders.
- Project selected for excellence from ~50 teams and presented at a program-wide final assembly.

Graduate Researcher (CS) | BYU DRAGN Labs | Provo, UT

December 2022 – August 2025

- Designed and maintained research tooling for large-scale NLP experiments, e.g. managing 300GB of training corpora
 - Pretrained 5 LLMs (1-3 billion parameters) using distributed, multi-GPU environments; required
 - Taught language modeling concepts to 15 undergraduate students
-

SKILLS

- AWS (For web development and lite data handling)
- SQL (MySQL, Postgres) + NoSQL;
- Familiarity with data tools (e.g., sequelize, Data Grip)
- AGILE development (Python, JS) + Git
- Interdisciplinary communication
- LLM deployment (e.g. vLLM, Ollama)
